SUMMARY

I build web interfaces with React, Next.js, Angular, and Laravel, and I test SaaS products used in Mexico and Europe. My public project Portico is a headless content page with a Node service, REST, GraphQL, and automated tests. I am looking for a full-time contract building content-managed web experiences and the services behind them.

SKILLS

Daily work. JavaScript, TypeScript, React, Next.js, Angular, Laravel, PHP, MySQL, REST, HTML and CSS, Tailwind, Playwright, Postman, JMeter, Git, GitHub, Jira, Docker.

Portico project. Node.js, Express, GraphQL, Headless content models, Jest, React Testing Library, Personalization and A/B tests, GitHub Actions, ESLint, Prettier, AI-assisted development with Cursor.

EXPERIENCE

QA Analyst, Nelumbo Consultores May 2025 — Present

Remote · Cúcuta, Colombia

- Test SaaS products for clients in Mexico and Europe, on web and mobile, including CheckPlus, Obras, and IDP Health.
- Turn requirements into functional, regression, and exploratory tests. Track defects in Jira.
- Started UI automation with Playwright. Call APIs with Postman and run load checks with JMeter.
- Investigated timezone bugs, slow paths, and race conditions, and wrote them so engineers could reproduce them.
- Work with teams that ship Java and Spring Boot services. Use Git and GitHub on that delivery flow.

Web developer, Independent March 2025 — Present

Arboledas, Colombia

- Designed and built cafemarron.co, a four-page marketing site for a coffee producer, replacing a generic template.
- HTML and CSS, a shared header, a mobile layout, product and farm pages, and WhatsApp ordering.

Full-stack developer, Academia Inglés Para Todos February 2023 — June 2023

Cúcuta, Colombia

- Built responsive screens in Angular and APIs in Laravel with MySQL.
- Checked endpoints in Postman and supported the people testing the application.

Front-end developer, Artemisa Plant Shop August 2021 — November 2021

Cúcuta, Colombia

- Built an HTML and CSS storefront for a plant shop and agreed changes directly with the owner.

SELECTED PROJECT

Portico — content platform slice 2026

github.com/jhoncarlosam-dev/jhon_site/tree/main/proof/content-platform

- Express service in TypeScript serves one content page over REST and GraphQL, with a 30-second cache.
- Next.js renders the marketing page on the server and prebuilds the story pages from the content model.
- Content types for pages, modular blocks, a dynamic form, and an author reference, plus a tested migration from schema v1 to v2. Same shapes you would create in Contentstack or Contentful.
- Stable A/B hero from the visitor id, and a subscriber segment after the form is accepted.
- Jest, React Testing Library, and Playwright. ESLint, Prettier, and GitHub Actions.
- Open-Meteo weather and an OpenStreetMap embed on the location block.

EDUCATION

Universidad Nacional Abierta y a Distancia (UNAD). Systems Engineering, in progress. Started February 2025.

Universidad Autónoma de Bucaramanga (UNAB). Software development diploma, Misión TIC. March 2022 — October 2022.

Platzi. UI test automation with Cypress. December 2024.

Universidad Francisco de Paula Santander. Systems engineering coursework, started 2017.

LANGUAGES

Spanish, native. English, intermediate (A2/B1) and in active study.
